

TRIDENT HYDRO TWISTERS®

Hydro Tek has expanded the very popular Trident Hydro Twister® Series, that was released fall 2015, with models available in a larger deck. These 28" Trident models include a high pressure inlet filter to reduce nozzle clogging from debris in the water. They are constructed of stainless steel, brush skirt to contain the splash, and a new hardened aluminum rotary arm.

Available in choice of wheel preference: three casters for the convenience of free movement to wash side to side or choose the large, airless rear tire version to reduce fatigue when working in straight lines.

Additionally, the newly updated 28" round deck models have a unique spray arm with 4 angled multi-thrust nozzles for effective and efficient cleaning, designed to be used with your larger volume pressure washers for unprecedented cleaning speed.

Maximum 10gpm, 4000psi, 250°F Minimum 5.5gpm recommended

Model# ANT28, Three, non-marking casters, new 28" round deck with new 4 nozzle spray arm

Model# ANT29, Large, airless rear tires, adjustable pressure valve, 28" deck with new 4 nozzle spray arm and hoop handle folds for storage.
